

1. Signup Page:

- Remove or substitute OTP.
- Display a successful registration confirmation message to users and make sure all back buttons work during signup.

2. Landing Page:

- Once the user logs in, the landing page should be a game menu with descriptive icons.

3. Login Page:

- Replace email with username to minimize complexity.
- Display fixed passwords in bold on the same page with the entry box.

4. Free Text Entry:

- Add a hint statement for free-flow text entry, such as "የተሰማህን ሃሳብ ጣፍ" (Express your thoughts).
- No limit to text entry here.

5. Datasets:

- Include special strokes (e.g., shift, space) in the free text dataset but not in the fixed text dataset.
- For the fixed keystroke dataset, include time data only on the body and session number per user
- Maintain distinct datasets for each language keystroke to avoid mixing.

6. Scoring and Leaderboard:

- Scoring is important for the leaderboard and should be based on the number of sessions.
- Explicitly count sessions for every user for every game, and rank users in descending order based on the sum of sessions in each game.
- Games should be unlocked step by step.

7. Machine Learning Training:

- We will explore whether to use image or SVM files and determine the suitable format for exporting data for machine learning training.

8. Game Instructions:

- Provide bilingual instructions both on the menu page and at each game (e.g., swipe images description).
